PROFESSIONAL SUMMARY

Backend Engineer with 4+ years of experience building scalable REST APIs and backend systems with Python, Node.js, Express.js, PHP, MySQL, PostgreSQL, and MongoDB, now focused on Generative AI and Agentic AI. Builds LLM-powered applications with LangChain and LangGraph: multi-step AI agents, multi-agent systems with graph-based memory (FalkorDB), Retrieval-Augmented Generation (RAG), vector search with ChromaDB, structured LLM outputs, and LLM observability with LangSmith, served through FastAPI. Brings production experience from a fantasy sports platform with 200,000+ users, including payment systems (Finix, 3DS2, ACH), webhooks, event-driven processing, idempotent transactions, and fraud prevention that reduced false positives by 30%.

TECHNICAL SKILLS

Generative AI & LLMs: LLM Application Development, Prompt Engineering, Retrieval-Augmented Generation (RAG), Embeddings, Semantic Search, Structured Output Extraction, Grounded Answers with Citations

Agentic AI: AI Agents, Multi-Agent Systems, Multi-Step Agent Workflows, Agent Memory (Semantic, Episodic, Procedural), LangGraph (Stateful Agent Graphs), LangChain, LangSmith (Tracing & Observability), Groq, Tavily Search API

Languages: Python, JavaScript, SQL, Cypher, PHP

Backend: FastAPI, Node.js, Express.js, RESTful APIs, Webhooks, Microservices, Event-Driven Architecture, Asynchronous Processing

Databases: PostgreSQL, MySQL, MongoDB, Redis, ChromaDB (Vector Database), FalkorDB (Graph Database)

DevOps & Tools: AWS (EC2, S3, RDS, IAM, CloudWatch, Lambda, SQS), Docker, Docker Compose, CI/CD, GitHub Actions, Git, GitHub, GitLab

Payments & Integrations: Finix, Evervault, 3DS2, ACH, Ethoca, SportsRadar API, RotoWire API

Concepts: System Design, Multi-Tenant Architecture, Idempotency, Consistent Hashing, API Performance Optimization

AI PROJECTS

RecallOps – Multi-Agent Incident Response (Graph Memory) | *Python*, *LangGraph*, *FalkorDB*, *Cypher*, *Groq*, *Streamlit*
github.com/Kuldeep-Singh-Naruka/recallops

- Built a **multi-agent incident-response system** for the Graph Hacks hackathon by WeMakeDevs and FalkorDB (Oct 2026): a **LangGraph pipeline of 5 agents** (triage, parallel dependency and memory scouts, investigator, resolver) that shares one memory in the **FalkorDB graph database**.
- Modeled **semantic, episodic, and procedural agent memory** as a graph (service map, incident steps, fixes with success/fail scores); agents recall past fixes up to 3 dependency hops away with **Cypher** and rank them by track record, learning from human "fix worked / didn't work" feedback.
- Made concurrent writes safe with **atomic, exactly-once Cypher updates**: a 50-thread stress test lost **0 updates vs. 48 of 50** with naive read-modify-write; covered the system with 35 automated tests.
- Added **per-tenant graph isolation**, Groq LLM calls with **JSON-schema structured output**, guardrails enforced in code (never repeat a failed fix, escalate after 3 failures), and a Streamlit UI with persistent chat memory.

API Integration Monitor Agent (Agentic AI) | *Python*, *FastAPI*, *LangGraph*, *LangChain*, *PostgreSQL*, *ChromaDB*, *LangSmith*
github.com/Kuldeep-Singh-Naruka/API-Integration-Monitor-Agent

- Designed and built an autonomous **AI agent** that monitors third-party API documentation for changes, using a **5-node LangGraph state machine** (fetch, compare, summarize, classify, suggest fix).
- Used an LLM to classify each change as **breaking or non-breaking** and to generate suggested code fixes for affected integrations.
- Implemented **vector search with embeddings in ChromaDB** to retrieve relevant documentation context for the LLM (RAG), with PostgreSQL for persistence.
- Exposed the agent through **FastAPI** REST endpoints and added end-to-end tracing of every agent step with **LangSmith**.

HireFlow – AI Candidate Screening & Interview Intelligence | *Python*, *FastAPI*, *PostgreSQL*, *Groq*, *LangChain*, *React*
github.com/Kuldeep-Singh-Naruka/HireFlow

- Built an **LLM pipeline (Groq + LangChain)** that extracts structured job requirements and candidate profiles from unstructured resumes and job descriptions.
- Mapped each requirement to resume evidence with **quoted source citations**, giving explainable, grounded results instead of an opaque match score.
- Auto-generated targeted interview questions from skill gaps; built the **FastAPI** backend with PostgreSQL and a React frontend for live demos.

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer **Oct 2024 – Oct 2026**

Algoza Technologies Pvt. Ltd.

- Led backend services (Node.js, Express.js, PHP, MySQL, MongoDB) and admin panel development for a fantasy sports platform serving **200,000+ users**, covering user management, promo codes, and payment reporting.
- Built an end-to-end **Finix payment gateway integration**: card deposits, Evervault tokenization, 3DS2 authentication, ACH cashouts, and bank account payment instruments, with webhook-based, event-driven asynchronous processing.
- Implemented automated recovery for failed ACH transfers that restores cash, bonus, and rollover balances with **idempotent processing** to prevent duplicate transactions and keep financial data consistent.
- Integrated Ethoca fraud prevention, **reducing false positives by 30%** and lowering chargeback losses; integrated SportsRadar and RotoWire sports data APIs.
- Built a user analytics dashboard combining MongoDB and MySQL data (first/last play, 7-day, 30-day, and lifetime P&L, most-played games) used by the admin team.
- Led multi-tenant real estate CRM modules with tenant-based data isolation, optimizing APIs to process **50,000+ leads**; **increased lead conversion by 25%** and **saved 20+ hours per month** through automation.

Node.js & SQL Developer **Dec 2023 – Oct 2024**

Aryavrat Infotech Pvt. Ltd.

- Built Node.js APIs and bulk holiday upload and leave management modules for DeskTrack (HR & productivity), serving 10+ teams and reducing manual data entry by 80%.
- Reduced Lead Management page load time by 40% and delivered real-time Chart.js dashboards for 200+ clients.
- Wrote and optimized SQL queries and Node.js APIs to improve response times; fixed production bugs in Lead Management and DeskTrack applications.

PHP Developer **Jan 2023 – Dec 2023**

Unified Business Web Solution Pvt. Ltd.

- Developed a CRM / educational management system, a WHM portal, and custom admin panels for multiple clients.

Full Stack Developer **Jun 2022 – Jan 2023**

Global India IT Solutions

- Developed and maintained responsive web applications using PHP, MySQL, JavaScript, jQuery, and AJAX.

EDUCATION

Bachelor of Arts (B.A.) — University of Rajasthan, Jaipur 2020 – 2022
